# Three Simple Steps For Fitting Your Deck to Your Home

## 1. Snap a picture of your entrance

This gives us a visual and ensures there are no surprises for installing your new deck. Be sure the picture is taken back far enough to include the lay of the ground leading up to your door and wide enough to include the space for the size of deck you are interested in.

## 2. Measure the height of your threshold from the ground

(Or give us the measurement of how high you'd like the floor of your deck to be.) Most of our the deck models on our lot are 32" tall. But we can build them any height.

## 3. Text or email us this info

Send entrance picture and threshold measurement height to us and we'll guide you to the right deck height.
